Decision exhibit #80 — SOLUSDT

CERTIFICATE OF FILING

record #80 · SOLUSDT · evidence collected 2026-10-21T13:43:55+00:00 · rules v2

VERIFIED

Verdict Desk · simulated decision record · evidence collected 2026-10-21T13:43:55+00:00 · rules v2
This document is generated from the public ledger line for record #80. It can be regenerated byte for byte from that line alone.

1. What the agent saw, and when

Evidence packet collected at **2026-10-21T13:43:55+00:00** for **SOLUSDT**. Every item below is frozen inside the record; the decision cannot be re-argued against different data later.

CLASS	SOURCE	ITEMS	DETAIL
Price candles	`Binance public REST`	72 candles, interval 1h	newest candle age n/a min
Funding rate	`https://www.okx.com/api/v5/public/funding-rate?instId=SOL-USDT-SWAP`	SOL-USDT-SWAP	rate 8.8457500818e-06
News	`https://api.gdeltproject.org/api/v2/doc/doc`	0 articles	solana
Voices	`5 outlets`	40 headlines	1 convergences, 0 tokens not converged

2. Who argued what

Two analysts read the same frozen packet. A claim survives only if its citation matches the cited evidence item; claims that fail are kept, with the reason, rather than hidden.

Bull analyst — 4 kept, 0 refused

CLAIM	EVIDENCE IT CITES
Price is above both the fast EMA 106.540806 and slow EMA 105.663829, confirming a bullish trend alignment	E4 Trend: fast EMA 106.540806 versus slow EMA 105.663829
Last candle volume is 1.3516 times the 24-candle average, indicating strong buying interest and potential continuation	E7 Last candle volume is 1.3516 times the 24-candle average
Return over the last 24 candles is 1.2258 percent, showing positive momentum in the short term	E5 Return over the last 24 candles: 1.2258 percent
Perpetual funding rate is positive at 8.8457500818e-06, reflecting net long bias and supporting upward price pressure	E3 Perpetual funding rate 8.8457500818e-06 (SOL-USDT-SWAP)

Bear analyst — 3 kept, 1 refused

CLAIM	EVIDENCE IT CITES
Funding rate is deeply positive at 8.8457500818e-06, implying excessive long leverage and a crowded trade vulnerable to forced liquidations	E3 Perpetual funding rate 8.8457500818e-06 (SOL-USDT-SWAP)
Last candle volume is 1.3516× the 24-candle average, historically a climax print that often marks the end of a local move rather than its continuation	E7 Last candle volume is 1.3516 times the 24-candle average
ATR over 14 candles is 0.691429, a tight range that compresses volatility and raises the risk of a sharp mean-reversion move to the downside	E8 Average true range over 14 candles: 0.691429

CLAIM REFUSED	WHY
Price is within 1.6% of the 72-candle high (108.25) and only 0.07% above the fast EMA (106.540806), showing exhaustion at resistance	number not in cited evidence: 1.6

3. Which argument decided it

1 argument would change the verdict if removed. Those rows are the attribution: the outcome does not rest on the conclusion, it rests on them.

SIDE	ARGUMENT	WEIGHT	EDGE WITHOUT IT	ACTION WITHOUT IT	DECIDES
bull	**Short-term trend above long-term trend**	**1.5**	**-2.5**	**SHORT**	**yes**
bear	MACD histogram negative: bearish momentum	1.0	0.0	FLAT	no
bear	Price up but MACD negative: bearish divergence	1.5	0.5	FLAT	no

4. The decision

FLAT

Bull 1.5 vs bear 2.5: edge -1.0 does not reach the entry threshold of 1.5.

Edge (bull minus bear)	-1.0
ATR(14)	0.691429
Rules version	v2

5. Market voices

TOKEN	BIAS	VOICES AGREEING	CONVICTION	URGENCY
BTC	bullish	CoinDesk, CryptoSlate, Decrypt	high	high

6. Integrity

Recorded SHA-256	`04e260dc39cdecb967ef23513aebd7aee260d2101e2507c7704c94dfb0532283`

Verdict	**MATCH — the record is unchanged**
Previous record	`0cf26034f0aa7fa90bdbe45f6dd495b9272d7b49505e104bde7f53223977065d`
Position in the published chain	155 of 155 · every link verified
On-chain anchor	matches the hash written on Ethereum Sepolia — anchor #80, 1792605204

7. What this exhibit does not prove

- It does not prove the decision was wise, only that it was **made on this evidence, by this rule, at this time**, and that nobody edited it afterwards.
- Positions are **simulated**. The system holds no exchange credentials, builds no orders and signs nothing.
- Results exclude fees, funding costs and slippage. Realised figures over a short window are not evidence of edge.
- The analyst layer is an LLM. Its claims are constrained to cited evidence and validated automatically, but the validator checks the citation, not the financial merit of the opinion.
- News and voices are secondary sources read through public feeds; they inherit those feeds' errors.

Verdict Desk publishes one dossier per hour and hash-chains each to the previous one. The chain head is anchored on Ethereum Sepolia. No order is placed, signed or transmitted by this system. This exhibit is evidence of a decision process, not investment advice.
